Task 3 – REST API Integration

Project Name : GitHub Profile Finder

Submitted By: Kashish Saini

Submission Date: 01 July 2026

Project Description

GitHub Profile Finder is a responsive web application developed using HTML, CSS, and JavaScript. The project integrates the GitHub REST API to fetch and display GitHub user profile information dynamically. Users can search any public GitHub username to view profile details such as avatar, bio, followers, following, repositories, and other account information in real time.

GitHub REST API

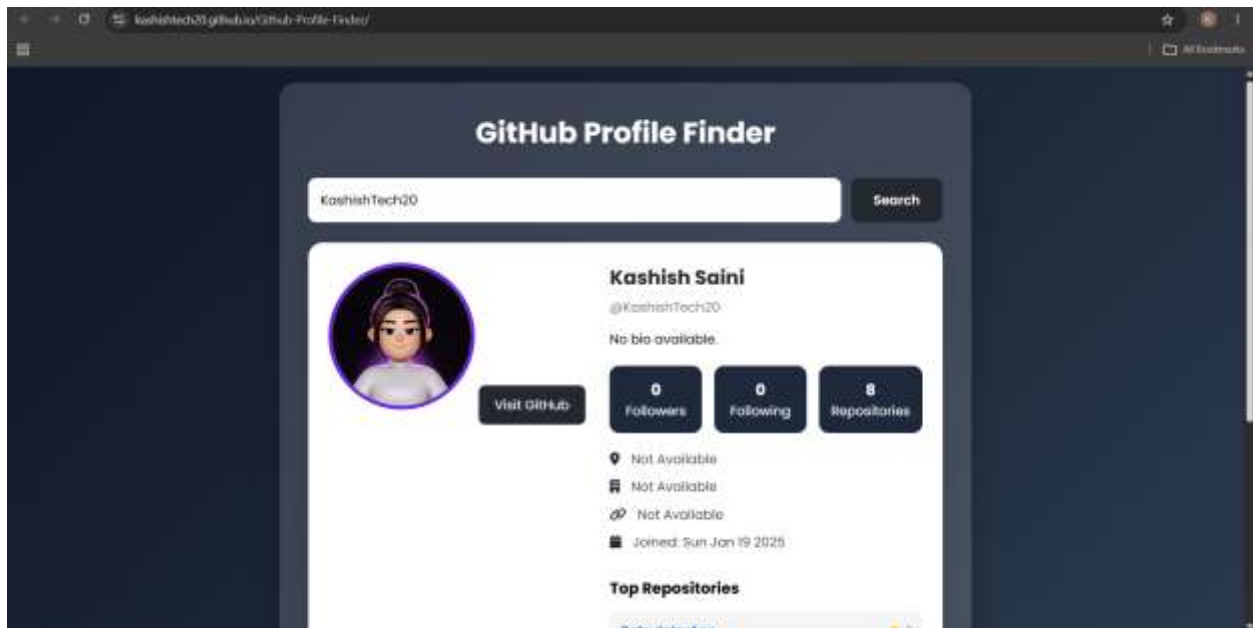

The application uses the **GitHub REST API** to retrieve publicly available GitHub user information. It sends a request based on the entered username and receives data in JSON format, which is then displayed dynamically on the webpage.

Technologies Used

- HTML5
- CSS3
- JavaScript (ES6)
- GitHub REST API

Features

- Fetch real-time profile data
- Display profile picture
- Display followers & following
- Display public repositories

Code Snippets

HTML

```
<div class="search-box">
```

```
<input
  type="text"
  id="searchInput"
  placeholder="Enter GitHub Username">
<button id="searchBtn">
  Search
</button>
</div>
<div id="profile"></div>
```

CSS

```
.profile-card{
  display:flex;
  gap:30px;
  background:#fff;
  border-radius:18px;
  padding:25px;
  box-shadow:0 10px 25px rgba(0,0,0,.15);
}
.stats{
  display:grid;
  grid-template-columns:repeat(3,1fr);
  gap:15px;
}
```

JavaScript (API Fetch)

```
async function getProfile(username) {  
    const userResponse = await fetch(  
        `https://api.github.com/users/${username}`  
    );  
  
    if (!userResponse.ok) {  
        throw new Error("User not found.");  
    }  
  
    const user = await userResponse.json();
```

Commands Used

Project developed using Visual Studio Code and deployed using GitHub Pages

Conclusion

The GitHub Profile Finder successfully demonstrates REST API integration using JavaScript. The project dynamically retrieves and displays GitHub user information while providing a responsive and user-friendly interface. It enhanced my understanding of API integration, asynchronous programming, and frontend development.
